Table S1. The full 72-gene chaperone/protease census. (page 3 of 3)

WBGene ID	Sequence name	Gene	Role	Pfam domain(s)	In 61-gene regulon?
WBGene00007443	C08F8.1	pfd-1	chaperone	Prefoldin	
WBGene00019220	H20J04.5	pfd-2	chaperone	Prefoldin	
WBGene00006889	T06G6.9	pfd-3	chaperone	Prefoldin (manual add - no Pfam hit in this release; canonical complex member)	
WBGene00007107	B0035.4	pfd-4	chaperone	Prefoldin	
WBGene00020112	R151.9	pfd-5	chaperone	Prefoldin (manual add - no Pfam hit in this release; canonical complex member)	
WBGene00009004	F21C3.5	pfd-6	chaperone	Prefoldin	
WBGene00004798	F43D9.4	sip-1	chaperone	HSP20	
WBGene00021943	Y55F3BR.6	Y55F3BR.6	chaperone	HSP20	
WBGene00014233	ZK1128.7	ZK1128.7	chaperone	HSP20	
WBGene00014172	ZK970.2	clpp-1	protease	CLP_protease	
WBGene00016391	C34B2.6	lonp-1	protease	LON_substr_bdg,Lon_C	
WBGene00013541	Y75B8A.4	lonp-2	protease	LON_substr_bdg,Lon_C	
WBGene00021425	Y38F2AR.7	ppgn-1	protease	Peptidase_M41	
WBGene00004978	Y47G6A.10	spg-7	protease	Peptidase_M41	
WBGene00021615	Y47C4A.1	Y47C4A.1	protease	Peptidase_M41	
WBGene00010842	M03C11.5	ymel-1	protease	Peptidase_M41	Yes

Inclusion rule: membership decided from Pfam protein-domain annotations, not gene name. Eight domain families qualify a gene on their own (HSP70, HSP20, HSP90, DnaJ, Cpn60_TCP1, Prefoldin, CLP_protease, Peptidase_M41); the Lon protease additionally requires both Lon_C and LON_substr_bdg together, since either alone is not sufficient. Genes with a signal peptide co-occurring with a qualifying domain on the same protein isoform are excluded as ER-targeted. Two manual exclusions (ppk-3, rme-8) remove genes where the matched domain is a minor accessory feature rather than the protein's function. Two manual additions (pfd-3, pfd-5) restore canonical prefoldin subunits that carry no Pfam hit in this WormBase release but are unambiguous complex members.
